### **DETAILED ACTION**

Applicants' divisional Application filed on November 18, 2003 and the terminal disclaimer faxed on June 16, 2005 have been entered.

Therefore claims 1-6, 24-29 and 40 are pending in the Application.

Claims 7 to 23 30-39 and 41-46 have been cancelled.

#### ***Allowable Subject Matter***

Claims 1-6, 24-29 and 40 are allowed.

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitation of the dependent claims, in such manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The applied prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 3, 24, 26 and 40 A monolithic integrated circuit comprising a first sub circuit a second sub circuit and a bias current supply coupled to the first and second sub circuits including: a first bias circuit coupled to and to supply bias current to the first sub circuit, the first bias circuit including a first current modulator having a first switch input to control the rate of change of supplied bias current in response to the first switch input, the first switch input to indicate that the bias current is to start or stop being supplied to the first sub circuit's and a second bias circuit coupled to and to supply bias current to the second sub circuit. Further the prior art of record does not (Fleming) does not teach a bias supply coupled to the first and second sub circuits but rather a clock signal that provides logic signal to turn on or off different circuits. Further Fleming does not teach modulation of the bias current. (See also USP No. 6,665,339 and terminal disclaimer herein).
